

PRELIMINARY AMENDMENT  
DIV. OF 09/889,739, FILED JULY 20, 2001

**AMENDMENTS TO THE CLAIMS**

**This listing of claims will replace all prior versions and listings of claims in the application:**

**LISTING OF CLAIMS:**

1. - 7. (canceled).
8. (original): Electronic component of the inductive type, in particular an inductance coil, transformer or antenna, including:
  - a first part (1) made of magnetic material forming a first base (9) and at least an arm (8b) projecting above said first base;
  - a second part (13) made of magnetic material forming at least a second base and being secured to the free end of said arm of said first part so as to define therewith a core or a magnetic circuit,
  - a plate (4) inserted between said first and second bases and having an opening for the passage of said arm, this plate (4) carrying at least one electrically conductive winding (12) which surrounds said arm (8b), this winding ending by at least two electric contact plates (7a, 7b) located outside the projection of said first and second bases in the general plane of said plate, characterised in that said at least two electric contact pads are located on at least one tongue (16, 18) formed of at least one layer or sheet of said plate, the end of said at least one tongue being

DIV. OF 09/889,739, FILED JULY 20, 2001

folded and secured onto an external surface of said first or second base such that said electric contact pads are turned outwards.

9. (original): Component according to claim 8, characterised in that said first and second parts (1, 13) made of magnetic material together form a closed magnetic circuit with three arms (8a, 8b, 8c) connecting said first and second bases, said winding surrounding the central arm (8b).

10. (original): Component according to claim 9, characterised in that the plate (4) includes two tongues (16, 18) each having at least one electric contact pad, these tongues being folded and secured onto the same external surface of said magnetic circuit.

11. - 15. (canceled).
